

data.HRSA.gov

The Hypertension Control Dashboard provides a multilevel view of hypertension, or high blood pressure, control in HRSA-funded health centers. Users can view 5-year trends of state-level Uniform Data System (UDS) hypertension control data and how many health centers have achieved Million Hearts Hypertension Control Champion Challenge goals. View [UDS data](#) for additional information on health center clinical performance.

On this dashboard you can view:

- Five-year trends in hypertension control rates at HRSA-funded health centers nationally and by state
- Number of health centers that met or exceeded the Million Hearts Hypertension Control Champion Challenge goal of 80% hypertension control by state/territory.
- Percentage of patients with controlled hypertension by health center and whether a health center is a National Hypertension Control Initiative (NHCI) awardee.
- Numbers of patients at the national and state levels who were diagnosed with hypertension and who had their hypertension controlled.

Dashboard functionality

- To view hypertension control data for a specific state/territory, select the state on the map.
- To return to view national hypertension control data or select another state, click on the state to unselect.

Dashboard Data Download Source File: [XSLX](#)

Note: The dashboard data is updated annually using [UDS data](#) and [Healthy People 2030](#) objective data.

*Hypertension control averages are the sums of all health center patients with hypertension controlled within a given state divided by the sum of all health center patients with hypertension for that state.
